Like most moms-to-be, you want to give your baby a healthy start in life.

Shots (also called immunizations) are a safe way to protect you and your baby from some harmful diseases.

Thinking of having a baby?

Get shots before you get pregnant
It is best when shots are given before a woman becomes pregnant.

Whether it is your first baby, or you are planning to have another child, get up-to-date on your shots to protect you and your family. Talk with your doctor about which shots are right for you.

You need a flu shot!
During pregnancy, the flu can cause serious health problems for you and your baby.

A flu shot is a safe and easy way to protect both you and your baby from the influenza virus.

Traveling out of the United States?
Talk with your doctor about shots to protect you from diseases that are still common in other parts of the world.

Good News!
The protection you get from some shots is passed on to your baby during pregnancy. This will help protect your newborn.

Get caught up
After you give birth, get any immunizations you may have missed. Some shots are even given in the hospital before you leave.

Stop flu and whooping cough!
Babies can get very sick from the flu and whooping cough, but are too young to be immunized.

To protect your new baby, flu and whooping cough shots are needed for anyone who:
• lives with your baby, or
• takes care of your baby.

Prevent germs from spreading
Remind people who are around your new baby to wash their hands often and cover their mouths when they cough.

Good News!
Getting shots while you are breastfeeding is safe for you and your baby.

After your baby is born...
